This Action is responsive to the communication filed October 16, 2006.

Applicant's explanation of the invention is noted with appreciation. For the record it is noted that elements 30 of valve 25 are voids or connections, not seals. Figures 5I-5 IV, which show module 12 between 19 and 11, are considered to be schematics. The explanation that 20 connects to 17 is not present in the original disclosure but understanding that connection is considered to be within the level of skill of a routineer in the art, especially since Figures 5I-5IV show supply pressure P as always present.

As to the X reference cited by the EPO, shuttle valve 11 cannot perform the recited functions of tying the pilots ducts together while isolating them from the supply duct in one position and connecting all of the ducts in another position.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Fox whose telephone number is 571-272-4912. The examiner can normally be reached on Patent Hoteling Program.
